

ACCESSORIES

FOOTPLATE LINES

Footplate lines are necessary when using yacht legs in order to keep the legs vertical whilst taking the ground. Some owners may wish to supply their own. However we are able to provide them as an optional extra with each line having a stainless steel snap hook bonded to each end (see the price list for details)

STOWAGE BAGS

Stowage bags are also available for convenient stowage of the legs on board and help to keep all the components easily accessible.

YACHT CRADLES AND BOAT SUPPORTS

We also manufacture a wide range of transportable and stackable galvanised steel yacht cradles and power boat supports. For details of these products please ask for our yacht cradle literature.

YACHT LEGS

Two types of yacht legs are available, namely Fully Adjustable and Pre-set. All our yacht legs are made from high strength and low weight aluminium tubing, marine grade castings and stainless steel fittings. They are designed to support vessels up to 25 tons

displacement. Average stowage length is 1.20 metres. The legs take only a few minutes to prepare and enable the vessel to dry out in safety. Detailed fitting instructions are supplied for installation by boat yards or private owners.

FULLY ADJUSTABLE LEGS

PRE-SET LEGS

- Handwheel
- "U" pin
- Backing block
- Hull
- Gasket
- Hull fitting
- Cap
- Stainless steel spigot
- Leg top cap
- Compression spring (load indicator)
- Adjustment screw
- Adjustment inner tube
- Rubber fenders
- Fender locking screw
- Fender support sleeve
- Middle section
- Clevis Pin
- Adjustable foot tube
- Footplate lines
- Detachable footplate
- Rubber bush for hard standing

The **Fully Adjustable** range of yacht legs provide a trim adjustment of 600mm (24") in total, enabling the vessel to remain upright over irregular seabed conditions. The adjustment also gives control of the weight distribution ensuring that the primary weight of the boat is placed upon the keel. We strongly recommend this range of yacht legs for boats over 10 tons displacement.

Advantages:

- Telescopic for minimum stowage
- Simple hull fitting attachment
- Adjustable fenders providing correct leg angle to vessel
- Optional footplate lines, to keep leg vertical
- Heavy duty fitting packs for above average displacement

The **Pre-Set** range of legs are more suited to yachts and power boats up to 9 tons displacement. The telescopic design of the legs allows most cruising vessels of average draft to stow each leg as a single compact unit. With an average weight of 10 Kgs (22lbs) per leg they are easy to handle. The preparation of each leg takes approximately two minutes.

Advantages:

- Enables vessel to dry out with maximum safety
- Takes only minutes to prepare and fix
- Average stowage length approximately 1.20 m
- Models available for a wide range of draft and freeboard heights

- "U" pin
- Rope Handle
- Backing block
- Nylon top cap
- Hull fitting
- Stainless steel spigot
- Rubber gasket
- Cap
- Outer tube
- Adjustable inner tube
- Rubber fenders
- Clevis Pin
- Middle section
- Adjustable foot tube
- Footplate lines
- Detachable footplate
- Dished area for soft standing
- Rubber bush for hard standing
